Novelty (Art. 33(2) PCT):

The subject-matter of the present application concerns a process for the preparation of telithromycin.

Since none of the cited prior art discloses the subject-matter of the present application, claims 1-42 are considered new according to Art. 33(2) PCT.

Inventive step (Art. 33(3) PCT) :

D1, which is considered to represent the closest prior art, discloses a process for the preparation of telithromycin (see page 1729) from which the subject-matter of the present application differs in the sequence order of the different reaction step.

The present overcomes some drawbacks of D1 like using hazardous reagents like NaH but

also provides Telithromycin of high purity (>99 %)

Furthermore, because of the inversion of sequence order, the intermediate compounds are different, and so is their chemistry. As a result inventiveness is required from the man skilled in the art.

On the basis of these facts, inventive step can be acknowledged.

Industrial application (Art. 33(4) PCT) :

Claims 1-42 fulfill the requirements of Art.33(4) PCT.
